Direct Download LinkKing's Cellar King's Cellar was the name of a famous underground room at the Old Bailey Prison, in London, England, which was constructed in 1701. It was the scene of the trial of the convicted but acquitted killers John and Thomas Devell. History At the Old Bailey the prisoners were kept in a cellblock called "The Cage". In 1701 a separate cellblock was created above ground which was called "King's Cellar". This was originally where the prisoners of importance were kept who were awaiting trial. Later the name "King's Cellar" was transferred to the underground room where those prisoners awaiting trial were tried. The two men who were ultimately convicted, John and Thomas Devell, had their trial in the King's Cellar on 22 August 1701. They were convicted of killing Benjamin Allen, a justice of the peace, after he had refused to attend a wedding in which they had been the best man. A rope was used to hang the two men on the gallows in the Old Bailey. John Devell died before he could be hanged, but Thomas Devell was hanged, drawn and quartered at Tyburn. Thomas Devell was a nephew of King George I and his wife Queen Caroline was the mother of Queen Charlotte. The famous cell is now a tourist attraction in the Old Bailey Museum in London. It is part of a guide tour for visitors to the museum. A black hat was originally used to cover the cell. It is now a part of the museum tour of the Old Bailey.
